DETAILED ACTION

This action is in response to the amendment filed on October 15, 2008.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 2-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nikander (6,029,151) in view of Jacobsen (6,486,862), as set forth in the previous Office Action.

With regard to newly added claims 14-15, Nikander discloses the invention substantially as claimed; however, Nikander does not disclose the Internet compatible communication terminal device is not connected to the Internet access network. Jobcobsen teaches a method for displaying information in a mobile device comprising the Internet compatible communication terminal device is not connected to the Internet access network (card reader can be connected by wireless modem, interface, etc.--

col.17, lines 18-22). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teachings of Jacobsen within Nikander for the motivation of using the mobile device to access the Internet and using the card reader to pay for access.

Response to Arguments

Applicant's arguments filed October 15, 2008 have been fully considered but they are not persuasive. In response, to the Applicant's argument that there is no motivation to combine the Nikander and Jacobsen references, the Examiner recognizes that references cannot be arbitrarily combined and that there must be some reason why one skilled in the art would be motivated to make the proposed combination of the primary and secondary references. *In re Nomiya*, 184 USPQ 607 (CCPA 1975). However, there is no requirement that a motivation to make the modification be expressly articulated. The test for combining references is what the combination of disclosures taken as a whole would suggest to one of ordinary skill in the art. *In re McLaughlin*, 170 USPQ 209 (SSPA 1971). References are evaluate by they suggest to one versed in the art, rather than by their specific disclosures. *In re Bozek*, 163 USPQ 545 (CCPA) 1969. In this case Nikander discloses a method for performing electronic transactions. Jacobsen teaches a device that may be used to access the Internet and card reader to pay for access. The two references are analogous art; therefore, the Examiner found motivation to combine.

The Applicant argues that neither reference discloses or teaches a connection between the Internet compatible communication device an upon an Internet access

request a relationship between the interface and the Internet compatible communication device is established. In response, Jacobsen teaches a wireless device having a card reader whereby the card can be a PCMCIA card such as a modem including a wireless reader or data storage card (col.16, lines 10-57 and col.17, lines 18-22). Therefore, the Examiner is interpreting the combination of Nikander and Jacobsen as reading onto the invention substantially as claimed.
